

Keeping Your Customers Safe

Ensuring that members of the general public who use commercial premises are kept safe is an important issue for any business. This is particularly true when the premises are frequently visited by children, for example fast food chains.

Despite this there are still thousands of finger trapping accidents occurring annually where fingers are caught between the hinged edge of large and often heavy doors and the door frame. Such incidents can cause devastating injuries, however they can be easily prevented and many leading chains are now ensuring that their doors are fitted with Finger Protection devices.

Strand Hardware is a leader in the supply of high quality Finger Protection devices which prevent the accidental trapping of fingers between the door leaf and the door frame. These are simple, effective and affordable solutions but will protect children and adults from serious injury and the business from expensive litigation. A strong fire retardant fabric material is kept under constant tension and is designed to cover the gap between the door and the frame automatically when the door is opened. The devices can be used on single, double and automatic doors.

Our Finger Protection devices have been tested to over 500,000 operations which mean that our customers, who include leading fast-food chains, can rely on this quality solution from Strand Hardware to protect their customers and their business.
